A admin is a person who manages an organization. As the organization's representative, he is its chief administrator. An admin is responsible for the smooth and efficient operation of his organization. Responsibilities of a Sys Admin include, but are not limited to: maintenance of the network's hardware and software systems, applications, and services. An admin can work with other administrative functions such as business managers, operations staff, finance staff, and human resources staff. All

sysadmins must be cognizant of and follow the security of network systems. Admins are also expected to keep their organizations' data secure. He is responsible for the right maintenance and security of the computer network by monitoring and controlling the network. For a more detailed information on Sysadmin Computer, we recommend this
